SCHOOL OF ROCK

Overview

Our Ventilation Systems Risk Awareness training course is designed for managers, specifiers, maintenance teams, and persons responsible for health and safety and the general wellbeing of building users and occupants.

The course

Course modules include the legislative requirements and standards related to:

1. General air handling and ventilation ductwork systems hygiene
2. Kitchen grease extract ductwork systems fire risk
3. Local exhaust ventilation (LEV) testing

The course also covers the requirements to minimise the risk of fire and the need for inspection, testing and maintenance of ventilation systems, fire damper installations, and associated passive fire barriers (fire stopping) and penetration seals.

Duration

The course is half-day (approximately four hours).

Delivery

- At your site
- At an outside venue
- Via Teams

Cost

On application.

" *The trainer was extremely knowledgeable and made the course very interesting – I was fully engaged throughout.* "

Investing in compliance training, delivered by expert tutors like ours, offers many important benefits that will take your business forward:

- Reduces the risk of non-compliance
- Promotes a safe workplace environment
- Defines organisational policies in line with government guidelines
- Boosts the company reputation and bottom line
- Supplies evidence that employees have received training, ready for checks and inspections

Compliance training helps to build, maintain and grow a company that will flourish now and in the future.
